### **Investment Perspectives**

#### Market

After a positive start to the year, the US market declined 1.6% this month due to concerns that US government policies would weigh on economic growth and consumer and corporate sentiment. Meanwhile, building on strength last month, Europe rose over 3%. By sector, Consumer Staples fared best, up more than 4%, while Consumer Discretionary fell the most, nearly 7%.

#### Portfolio

Recent weakness in Information Technology—caused by policy uncertainty and the possible effects of that policy on Al supply chains, as well as the release of DeepSeek's Al model—has created opportunities. This month, we repurchased ASML, the Dutch advanced photolithography equipment supplier, after selling it last year following a nearly two-year surge in its shares. Since we sold it, the company cut its 2025 outlook due to caution on export control risks with China and a demand reset in extreme ultraviolet (EUV) technology after Samsung and Intel delayed leading edge chip production to 2026. ASML remains the top lithography equipment provider, critical at the leading edge of chip production, with no credible rival. When we repurchased, ASML's shares were 20% below our sell price. Looking ahead, the company should benefit from TSMC's 2-nanometer process node ramp-up, which requires more EUV tooling, its fab buildouts in Arizona and Japan, and its joint ventures in Europe.

#### Performance Attribution | Feb.

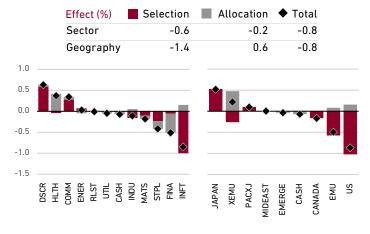

- In Information Technology (IT), key detractors included customer relationship management software company Salesforce and IT services business Globant, whose shares were hurt by concerns over slowing growth in the US. Globant also indicated business sentiment in its key Latin America markets could be hurt by political uncertainty and US tariff policies.
- In Consumer Discretionary, Japanese electronics and media company Sony reported better-than-expected results, boosted by strong revenue growth in its gaming division.
- Poor results in the US were primarily due to internet giant Alphabet and Globant. The January release of powerful, low-cost, Al models by China's DeepSeek and Alibaba may pose a competitive threat to Alphabet's nascent Al business.

#### Benchmark Performance | YTD

#### Performance Attribution | YTD

- IT investments detracted the most, including Globant, Salesforce, and semiconductor designer Broadcom. Shares of the latter fell amid rising uncertainty about demand for Al chips. Our underweight to another chip designer, NVIDIA, was helpful.
- Communication Services company Meta Platforms has shown that it has already benefited from expenditures on AI, which have led to improved user engagement and monetization.
- While US holdings detracted overall, relative returns were helped by Meta and Vertex Pharmaceuticals, whose stock jumped on news that the US Food and Drug Administration had approved the company's non-opioid (and, importantly, non-addictive) pain drug Journavx. The absence in the portfolio of auto company Tesla was also a positive.
